### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kieum "Jenny" Sung (Reg. 48,639) on January 29, 2004.

The application has been amended as follows:

- (a) Amend claims 35, 42, 43, 44, 46, 52 and 69-71 to read as below.
- 35. (Currently Amended) An electrical component package comprising:

an electrically conductive base having a coaxial via, the coaxial via including a center pin surrounded by an insulating ring such that the insulating ring electrically isolates the center pin from the rest of the base;

an electrical component mounted on a first surface of the base; and

a coaxial wire eapable of connecting the electrical component to the base, wherein the coaxial wire includes a wire capable of electrically coupling the electrical component to the center pin, an insulation layer surrounding the wire, and an electrically conductive shield coating the insulation layer.

42. (Currently Amended) The component package of claim 35 further comprising a solder mask tin layer deposited on a second surface of the base for protecting the insulating ring and improving solderability of the second surface.

Art Unit: 2827

43. (Currently Amended) The component package of claim 42, wherein the solder mask fin layer is deposited on the center pin and over a part of the surrounding insulating ring.

- 44. (Currently Amended) The component package of claim 43, wherein the solder mask tin layer and the second surface form a substantially flat surface.
- 46. (Currently Amended) A structure for packaging electrical components, the structure comprising:

a <u>an electrically conductive</u> base material having at least one coaxial via, the coaxial via including a center pin surrounded by an insulating ring such that the insulating ring electrically isolates the center pin from the rest of the base material; and

a micro-coaxial wire extending from the coaxial via, wherein the coaxial wire includes a wire, an insulation layer surrounding the wire, and an electrically conductive shield coating the insulation layer, and wherein the wire is electrically coupled to the center pin and the conductive shield is electrically coupled to the base to form a coaxial connection.

- 52. (Currently Amended) The structure of claim 46, wherein the coaxial wire extends from a first surface of the base, further comprising a solder mask <u>lin</u> layer deposited on a second surface of the base and covering the center pin and a part of the insulating ring.
- 69. (Currently Amended) The device of claim 62 further comprising a solder mask tin layer deposited on a second surface of the base for protecting the haulating ring and improving solderability of the second surface.
- 70. (Currently Amended) The device of claim 69, wherein the solder mask tin layer deposited on the second surface of the base is deposited on the center pin and over a part of the surrounding insulating ring.
- 71. (Currently Amended) The device of claim 70, wherein the solder mask tin layer and the second surface are substantially flat.

Art Unit: 2827

(b) Cancel claims 55-61, not elected without traverse (restriction requirement of October

2, 2002).

2. The following is an examiner's statement of reasons for allowance:

The claimed invention discloses an electrical component package connection structure comprising an electrically conductive base having a coaxial via formed by a center pin surrounded by an insulating ring isolating the center pin from the rest of the base in combination with a coaxial wire connecting an electrical component mounted on a first surface of the base with the center pin of the base, wherein, the coaxial wire includes a wire capable of electrically coupling the electrical component to the center pin, insulation layer surrounding the wire, and an electrically conductive shield coating the insulation layer. This combination package structure is not disclosed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

Art Unit: 2827

(a) Shield layer 17 shown with cross-hatching pattern instead of a single line,

(b) cross-hatching pattern amended for the insulating layer 10, and

(c) cross-hatching pattern amended for the solder mask layer 16,

(d) cross-hatching pattern amended for solder / glue connection.

as marked red in figure 2.

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ishwar (I. B.) Patel whose telephone number is (571) 272 1933. The examiner can normally be reached on M-F (8:30 - 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571) 272 1957. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
